Customer Reviews

I currently own over 25 chemistry demonstration books so I definitely can say with confidence that this is one book you need to own. The reason I purchase so many demo books is because I can't seem to find one that doesn't cost an arm and a leg for the needed supplies and equipment, or have a large danger factor. In one book I own, for example, it would cost me over 100 dollars for the supplies to do just one demo, plus all the prep time. I was able to use this book from the first day it arrived. Most of the demos I have seen in it so far have been easy, basic and cost effective. They are well written with easy to understand instructions. Most of the ones I have read dont require a hood or safety shield, (although I have not yet finished perusing the book.) I teach in a school with a very limited budet and few lab supplies so I was very excited with these demos. The chemicals involved are very standard ones that most schools already have in their chemical closets. I teach standard high school chemistry, and although I have not done a demo from the book with a super

WOW factor yet, I am happy that the ones I have used so far have captured the interest of my students and generated several discussions. I am definitely going to buy the first volume as well. This has become my economical, quick, and easy to understand go-to book for the semester.
