Living Fossils (Casebooks In Earth Sciences)

Synopsis

The case history approach has an impressive record of success in a variety of disciplines. Collections of case histories, casebooks, are now widely used in all sorts of specialties other than in their familiar application to law and medicine. The case method had its formal beginning at Harvard in 1871 when Christopher Lagdell developed it as a means of teaching. It was so successful in teaching law that it was soon adopted in medical education, and the collection of cases provided the raw material for research on various diseases. Subsequently, the case history approach spread to such varied fields as business, psychology, management, and economics, and there are over 100 books in print that use this approach. The idea for a series of Casebooks in Earth Science grew from my experience in organizing and editing a collection of examples of one variety of sedimentary deposits. The project began as an effort to bring some order to a large number of descriptions of these deposits that were so varied in presentation and terminology that even specialists found them difficult to compare and analyze. Thus, from the beginning, it was evident that something more than a simple collection of papers was needed. Accordingly, the nearly fifty contributors worked together with George de Vries Klein and me to establish a standard format for presenting the case histories.

Book Information

Series: Casebooks in Earth Sciences

Hardcover: 291 pages

Publisher: Springer; 1984 edition (July 18, 1984)

Language: English

ISBN-10: 0387909575

ISBN-13: 978-0387909578

Product Dimensions: 10.6 x 7.5 x 1.6 inches

Shipping Weight: 2 pounds

Average Customer Review: 4.0 out of 5 stars [See all reviews](#) (1 customer review)

Best Sellers Rank: #4,590,260 in Books (See Top 100 in Books) #47 in [Books > Science & Math > Biological Sciences > Paleontology > Paleozoology](#) #822 in [Books > Science & Math > Evolution > Organic](#) #4035 in [Books > Textbooks > Science & Mathematics > Biology & Life Sciences > Zoology](#)

Customer Reviews

This is a collection of 34 case studies of "living fossils". If you like reading scientific journals this

book is for you. It is fairly technical and detailed. It was nice to find many evolutionary based articles in one book. Worth reading but not a quick read.
