Data Analysis & Statistics (Mathematical Analysis For Scientists & Engineers Book 5)

Synopsis

The Series Nos. 5 focuses on Data Analysis. In the sciences and engineering, model formulation and the solution of model equations cannot be deemed as success until experimental validation has been obtained. It is common therefore to generate considerable data in the course of experimentation, which must be analyzed to establish the validity of the proposed model. The Series on data analysis covers the fundamentals of probability and statistics, correlation and regression analyses. Part of the Series deals with data manipulation, where the main concern is to determine intermediate values from data tables. Particular attention is paid to cubic splines, which give a smooth curve fit to discrete numerical data.
